DOUBLE LOOP LACING

RECOMMENDED USAGE:

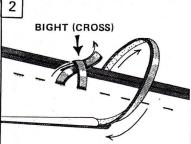

Medium size projects such as billfolds, purses, clutches, etc.

Use 3/32" or 1/8" lace with correspondingly sized slits.

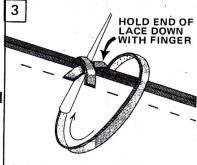

Double Loop Lacing uses 81/2 times more lace than the length of the project. For example; if your project measures 2 ft. around laced part, you will need 17ft. of lace.

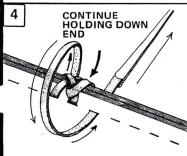

Beginning on front side of project, pull the needle and lace through the 1st slit. Leave about %" of the lacing end and go on to the next slit.

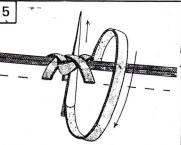

Pull the stitch tight; lacing over the end you left free. This forms a cross or "bight".

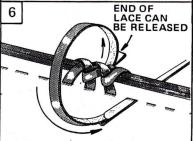

Push the needle under the cross or bight. Hold the end of the lace down on the opposite side.

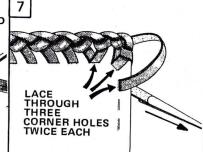

Pull the stitch under the bight snug but not tight. Lace through the next slit.

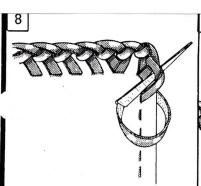

Follow the same procedures as in steps 1 and 2 making a cross or bight. Once again go under the bight and pull the stitch snug.

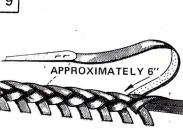

Lace through the next hole. The end of the lace can now be released as it is now locked in place.

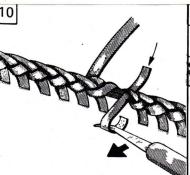

When lacing a corner, stitch through the three corner holes twice each.

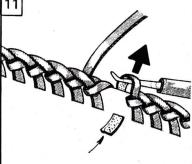

Be sure to go through bight on all corner stitches.

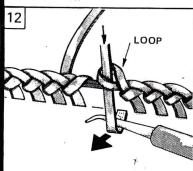

Lace until only 5" or 6" of lacing remains. You will now have to splice with a new length of lace. (See splicing instructions on page 8.)

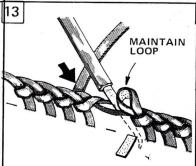

Continue lacing to starting point. Use modeling stylus to pull end of lace free of stitches.

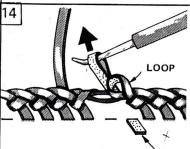

From back side pull the end of lace

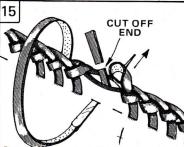

From front side, pull end of lace out of the loop.

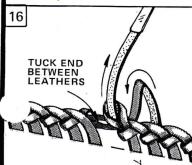

Push stylus down between the leathers and hook it over the end of the lace.

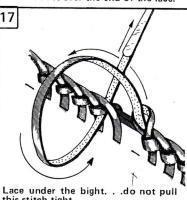

Pull end of lace out of slit and up between leathers. Two empty slits should appear on the front side; one on the back .

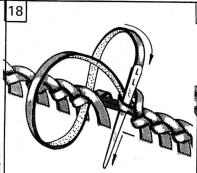

Cut off the end of the lace you have pulled out and tuck the end of the lace between the leathers. Lace through the next slit.

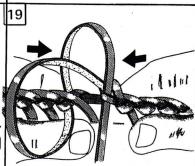

Pull stitch tight and lace up through loop from the back side. All slits on the back side should be filled.

this stitch tight.

Carefully cross over as shown. . .and push needle down through the loop.

Pull needle through. Push laced edges together to adjust starting loops for easier completion.
